adjustable rear rack

installation instructions:

1) Begin by installing the extendible stay mounts onto your MegaRack using four hex-head bolts and nuts (fig.1).

figure 1

2) Hold the MegaRack up to your bicycle's braze-on mounts to determine whether you will want to use inside or outside mounting, pointing up or down (fig.2).

figure 2

For bicycles without brazed-on threaded eyelets, use Delta stainless steel frame clamps. These are available to fit standard 5/8" tubing (MR1030) or oversized 7/8" tubing (MR1020). (fig.3).

figure 3

3) Tighten the bolts just enough to hold the rack in place yet allow repositioning by hand.

Adjustable Legs allow for different sized frames

Top Brackets are bendable and reversible for different frames. Brackets can be attached to braze-ons or seatpost clamp

4) Loosely attach the lower legs of the MegaRack to the threaded holes of your bicycle's rear axle dropouts. It may be necessary to spread the MegaRack to fit over the outside of the frame. Do not tighten yet.

5) Position the MegaRack so it's top plate is level. Extend the stay mounts until they line up with the braze-ons. It may be necessary to gently bend the rack stays for some bicycles. Fasten with two hex head bolts. You should now tighten all the other bolts.

seat or to carry passengers.

MegaRack Universal (Black)

Delta Cycle Corporation
P.O. Box 628, Foxborough, MA 02035 USA
Manufactured in China and Taiwan.
